MANAGER

Precision's InnalT^{Key} Password Manager

Internet users have a large number of passwords to manage for various websites and online services that they use. To ensure high security they need to use complex and long passwords and also make sure that these passwords are not re-used elsewhere. While complex passwords are necessary to prevent harvesting, this makes them difficult to remember.

This is where InnalT^{Key} Password Manager comes in, ensuring security by preventing credential compromise and providing convenience at the same time, thereby freeing users from this burden.

Introducing a biometric password manager which is extremely easy to install and safe to use to login to your work, entertainment, banking, social media and other websites on multiple devices.

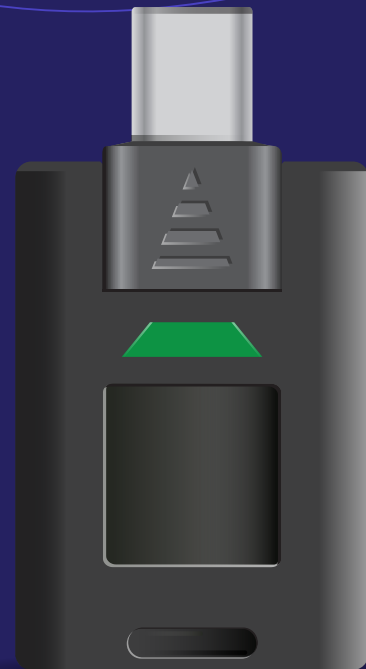

Worried about losing your key? Your credentials are protected by multiple layers of security. InnalT^{Key} stores all your credentials on the device in an encrypted form unlike other password managers which store them on the cloud or the computer.

To enhance safety, the saved URLs and their associated credentials are not stored in the same location.

What if something goes wrong? Our easy back up and recovery options have got your back. InnalT^{Key} recovers and restores all your credentials from all your devices to a single database.

InnalT^{Key} can store upto 2000+ credentials. So give it all you've got because this is the key to your security.

Don't just autofill your passwords, but authenticate them using biometrics.

Highlights
